Description

ArcGIS for iOS is a great way to discover and use maps. Tap on the map or use your current location and discover information about what you see. You can query the map, search and find interesting information, measure distances and areas of interest and share maps with others.

Find community hosted maps from ArcGIS Online - ESRI's online GIS. Alternatively you can use the authoring tools on ArcGIS.com to create your own maps that can be used in ArcGIS.

If you are an existing ESRI customer this application is part of your ArcGIS system. You can share your corporate maps and extend the reach of your GIS to your iOS devices within your enterprise using ArcGIS Server.

Features

Comments (1)

[amadea](#) (July 6, 2010)

Great app so far...love the fact that I can view data from [arcgis.com](#), including layers shared via my groups. But please add a routing feature and an ability to upload content from my phone to [arcgis.com](#). Also, with "search", it would be great if the search zoomed into the location at the appropriate scale for that map. Right now if you're zoomed in to close and then do a search where data is not available at that scale, it just appears gray. Not obvious that you just need to
